

cleaning systems in stainless steel series T

drum cleaning machine

The machines of the series T are designed for the cleaning of bulk goods/small parts within a washing drum.

The washing goods will be filled through the opening of the inclined drum and reversed during the washing process, also trimmed if necessary.

In standard the drum is made from perforated sheet with a hole diameter of 5 mm - other hole variants are available.

For filling and emptying the drum can be removed from the machine by using the handles.

An automatic loading is also possible.

Because of the different equipment/versions with this machine a wide range of requirements for the batchwise cleaning/trimming of small parts/bulk goods can be fulfilled.

The drive of the washing drum happens by a gear motor with continuous speed control - so the turning speed can be suited to the sensitivity of the washing goods.

For the basic technical datas please see „basic program“.

In standard the drum has a filling weight of 30 kg.

small parts cleaning cleaning systems in stainless steel

cleaning systems in stainless steel series C

The series C is a modified version of the standard series W (warm-watery cleaning) and K (cold/solvent cleaning).

In addition to the turn table washing basket these machines are equipped with a turning device for the use of small parts baskets/special devices.

Inside the removable turning device with integrated small parts basket scooping washing goods, small parts with drillings, sensitive parts and bulk goods will be cleaned.

To avoid damages during the turning process sensitive washing goods can be fixed by intermediate covers and clamping covers or special devices inside the small parts basket.

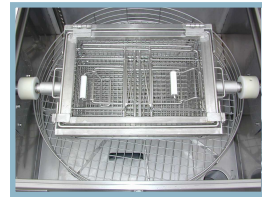

Optionally the function „swivelling“ allows different angle adjustments, where the turning device will be swivelled without a full turn.

W 40 C

W 60 C

W 80 C

On the horizontally rotating washing basket the cleaning of non-scooping parts, large modules and washing goods, that must not be turned during the washing process, takes place

technical data

	basket diameter turn table washing basket	measures small parts basket turning device	basket load turn table washing basket	basket load per small parts basket turning device
	mm	mm	kg	kg
type 40 C	400	(1 x) 350 x 150 x 160	70	10
type 60 C	600	(1 x) 375 x 220 x 200	100	30
type 80 C	800	(1 x) 475 x 320 x 200	150	30
type 92 C	900	(1 x) 475 x 320 x 200	200	30
type 115 C	1.150	(1/2 x) 475 x 320 x 200	300	30

For the basic technical data please see „basic program“.

All machines from the series C can be equipped with the accessories/components, filter systems, rinsings, dryings and the swivelling function etc. of the types W and K.

cleaning systems in stainless steel series TH

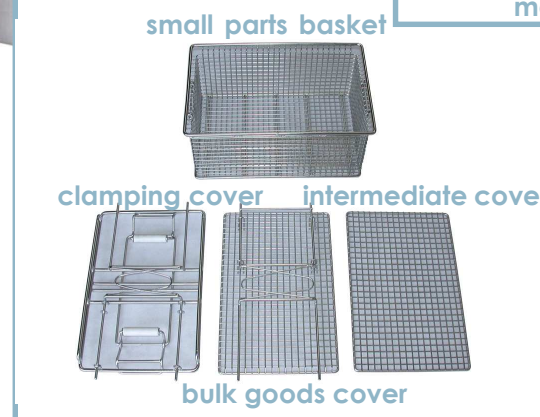

The machines of the series TH are also designed for the cleaning of scooping washing goods, small parts with drillings, sensitive parts and bulk goods.

They are equipped with a turning device without additional turn table washing basket. This turning device is permanently installed and can be fitted with different basket systems or special devices.

Depending on the machine size the turning device can be fitted individually with baskets of different measures and meshes or special devices.

mesh 1 - 24 mm

At standard basket sizes of 475 mm x 320 mm x 200 mm the machines will be fitted e. g.
91 TH with 4 baskets
and
115 TH with 9 baskets.

W 91 TH 4
with 4 baskets

The loading of the machines can happen by a transport trolley or a conveyor system.

All machines from the series TH can be equipped with the accessories/components, filter systems, rinsings, dryings and the swivelling function etc. of the types W and K.

At use of bigger basket systems, e. g. euro crate box, we recommend the inset of the series VL GE.
